Maintain Historical Billing Data

RescueNet® Archive

D A T A   S H E E T

The RescueNet Archive service helps ensure compliance by providing secure hosting, storage, and access to historical billing data for RescueNet Billing customers who are transitioning to ZOLL® Billing.
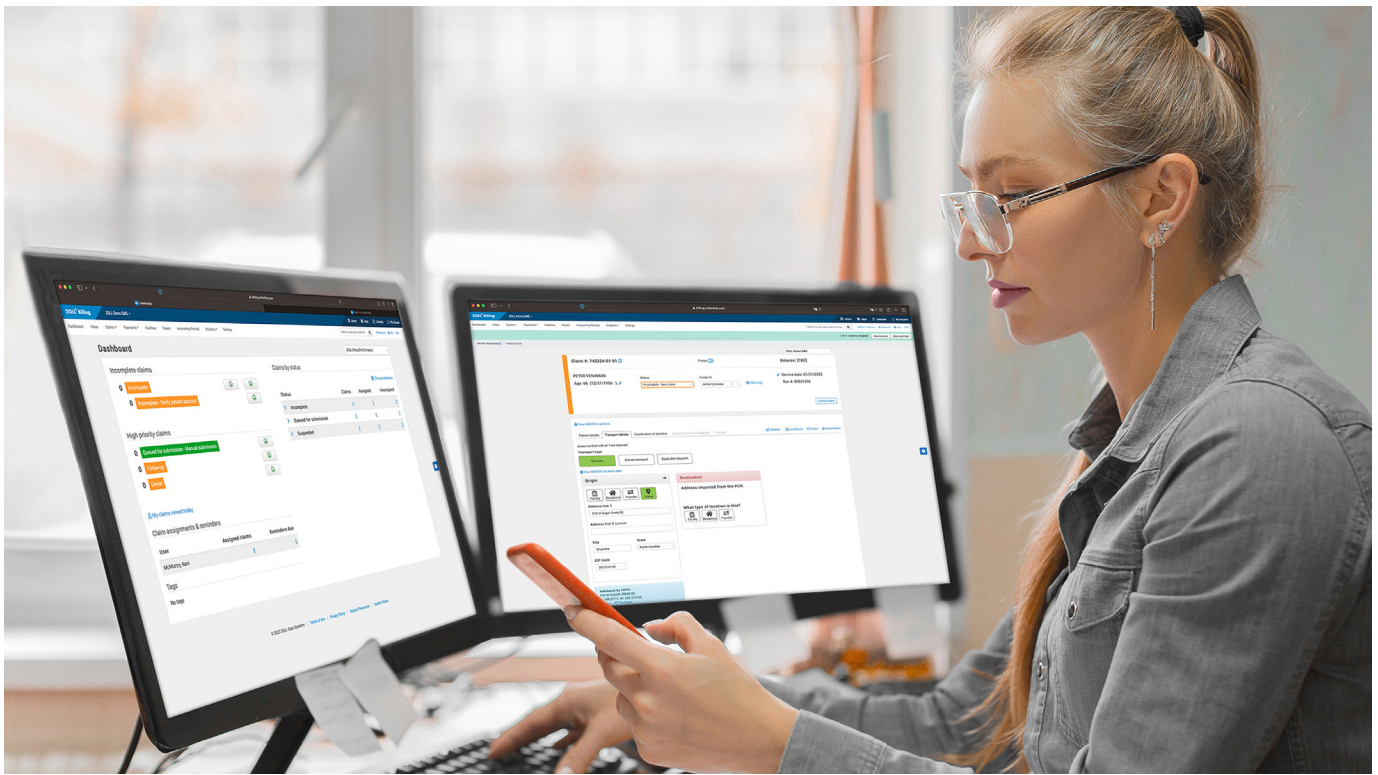

Patient billing data must be maintained for at least 11 years after claim submission to satisfy compliance regulations. The RescueNet Archive service takes RescueNet Billing data and autmatically pushes it to cloud-based cold storage for compliant access without the expense or responsibility of on-premises hardware or software. Using the RescueNet Archive service is easy: unlike with generic business intelligence tools, there is no SQL import/export step or manual work to re-map or normalize data.

RescueNet Billing customers who are moving or considering moving to the cloud-based ZOLL Billing software solution can transition with confidence, knowing that their historical billing data is readily accessible via our purpose-built data archival service. Built upon an object storage approach, it is ideal for data storage of analytics, backups, or archives at a lower cost than typical servers.

Capabilities

- Provides secure, compliant cold storage location to host and store historic RescueNet Billing data

- Migration tool automatically pushes data to the cloud

- Helps ensure compliance with state regulations

- Enables export data by specified date range and data overwriting

Benefits

- Ensures compliance with state regulations by preserving historical data

- Eliminates further investment in hardware, software, or IT resources to maintain a dedicated archival storage environment

Key Features

- Compliant cold data storage for RescueNet Billing customers' inactive data

- No need for manual data manipulation (re-mapping and normalizing)

- Fixed, monthly service fee includes unlimited users, files, and reports
